MVP demo journey
Add product > record sale > updated
stock > 7-day forecast > restock
Continue the next task
Keep navigation and filters familiar
Keep the first release focused
No separate admin dashboard.
Payments and auto-orders excluded.

First visit
Short welcome; explain stock and sales in everyday language
Choose how to begin
Set up my shop or Explore demo
Explore
My shop
Explore demo shop
Persistent Demo data label; keep sample and real data separate
Get authorized shop access
Use the agreed sign-in or restricted demo setup; preserve return path
Demo Home
Example stock, sales and labelled forecast. Return to page 1.
Confirm shop basics
Shop name and ETB; offer language choice only when supported
Home: no products yet
Clear next action: Add first product
Add Product
Name, selling price, opening stock; category optional
Leaving a changed form
Offer Keep editing / Discard changes; return to the previous screen
Correct
Required values valid?
Name present; price and stock valid, finite and non-negative
No
Yes
Show errors beside fields
Keep entries; focus first error; explain the required correction
Save product
Show progress; prevent double submit
Recommended form details
Numeric keyboard; visible ETB; explicit unit such as bottle or pack
Save failed or uncertain
Keep form values; verify save status before safe retry
No / unknown
Product saved?
Wait for confirmed persistence
Add another
Yes
Product added
Show current stock and selling price
Choose next step
Add another product or Record sale
Record sale
Record first sale
Continue on page 3

MVP sales boundary
No card, Telebirr, receipt or tax step.
Returns / voids need separate scope.

Start Record Sale
From Home primary action,
Sales tab, or product details

Find a product
Search by name; show selling price
and available stock

Search again

Product available?
Distinguish no results from
out-of-stock products

No

Yes

No matching product
Change search or go to Add Product;
preserve the return destination

Choose product and quantity
Default to 1; numeric input and +/-;
show available quantity

Quantity valid and in stock?
Positive supported quantity;
never allow negative remaining stock

No

Yes

Explain quantity problem
Example: Only 3 bottles available.
Keep product and entered quantity.

Review on the same screen
Item, quantity, unit price, total;
Confirm sale button

Confirm once
Show Saving; disable repeated taps;
retain request identity on retry

Review

MVP connectivity
Advanced offline sync is excluded.
Never label an unconfirmed sale Saved.

What did the save return?
Re-check current stock and
save sale + stock change together

No confirmation

Stock rejected

Stock has changed
Show latest available stock;
ask owner to review quantity again

Another sale

Connection lost or timed out
Sale not confirmed; keep input;
check whether that request saved

Saved

Was that sale already saved?
Use the same request reference

Reconnect and verify

Unknown

Not saved

Still cannot confirm?
Show pending verification;
no success message or duplicate retry

Retry the same sale safely
Only after determining it was not
saved; never create a second sale

Yes

Sale recorded
Clear confirmation and total;
example: 8 bottles remaining

Refresh related views
Sales history, Home summary, stock,
alerts and restock calculation

Continue
Record another sale or view history

Review sales

Sales history
Newest first, item, quantity,
total and recorded time

Open Forecasts
From bottom tab, Home alert, or a product detail shortcut

Choose a product
Searchable list; keep the product preselected from a shortcut

Load forecast and current stock
Show loading with product context; avoid an empty unexplained chart

Request successful?
Separate service failure from insufficient history

Retry

No

Response received

Forecast unavailable
Keep product context and stock; provide Retry

Enough real history?
Use the ML team's documented minimum; never invent a threshold

No

Yes

Documented fallback available?
Demo data may be used only in an explicitly labelled demo

Prepare seven daily estimates
Use trained model response; keep daily units and total consistent

Unavailable

Available

Not enough sales history
Explain why; suggest recording sales; do not display invented predictions

Label the result source
Show Baseline estimate or Demo data; explain limitations

Build history

Clearly labelled

Record more sales
Continue on page 3

Calculate suggested restock
Max(0, seven-day demand + safety stock - current available stock)

Show recommendation first
Suggested restock, expected demand, current stock, horizon and timestamp

After any stock change
Refresh current stock and restock qty.
Refresh or label stale forecasts.

Explain the numbers
35 expected - 10 in stock = 25 bottles; assumes safety stock is zero

Show supporting daily chart
7 labelled dates with units; text total accessible without chart

When suggestion equals zero
Say No restock suggested for this 7-day estimate; never show a negative.

Owner decides what to buy
Recommendation is an estimate; purchases remain a human decision

Buy later

Buys stock later

Keep monitoring
No automatic order or stock increase; return to product or Home

When goods actually arrive
Record quantity received on page 5
Proposed UX addition

Low stock != forecast shortage
Threshold alert follows stock level.
Forecast shortage follows 7-day demand.

Open Products
From Products tab or Home
low-stock shortcut

Browse product inventory
Name, price, available quantity,
unit and textual stock status

Choose list view
All | Low stock | Out of stock;
search stays visible

Add new product
Visible action from product list;
follow page 2 validation and save flow

All

Low / out

All products
Search by name; clear filters
when a result is missing

Low / out-of-stock list
Out of stock first; show quantity
and the reason for each alert

Choose item

Inspect item

Open product details
Stock, price, category;
Edit, Add Stock, View Forecast

Choose product action
Record sale, edit details,
receive stock or view forecast

Sell

Edit

Receive

Forecast

Record sale
Product already selected
Continue on page 3

Edit product details
Name, price, optional category;
keep saved sales history intact

Add stock received [proposed]
Enter quantity actually received;
show old + added = new stock

View demand and suggestion
Product already selected
Continue on page 4

Changes valid?
Validate edited fields or positive
received quantity; show inline errors

Correct in same form

Yes

No

Save the change safely
Show Saving; prevent duplicate receipt
updates on retry

Correct the highlighted field
Keep all entries; no silent reset

Verify then retry

Stock corrections [confirm policy]
Wrong counts need an explicit reason
and audit trail; never fake a sale.

Change confirmed?
Verify before reporting success

Yes

No / unknown

Inventory updated
Show actual new quantity;
refresh status and Home count

Save failed or uncertain
Preserve input; verify outcome;
retry the same change safely

Refresh restock guidance
Recalculate from new stock;
keep forecast source and date clear

Return to inventory / Home
Preserve search and filter state
Overview on page 1

Enter any data screen
Keep page title, selected item and navigation context visible

Loading
Show progress in the content area; keep navigation usable

What state is returned?
Never confuse zero, no data, connection failure and access failure

Empty

Records

No matches

Failure

Access

Retry

Access restored

No records yet
Explain the empty state; Add Product or Record Sale

Data available
Render readable content and one clear primary action

No search matches
Keep the query; offer Clear search and Clear filters

Network / service error
Keep input and any labelled old data; Retry after reconnecting

Session expired / wrong shop
Request authorized access; restore the intended destination

Follow action

Change search

Resume intended task
Preserve form, filter and selection where appropriate

Navigation rule
Home | Products | Sales | Forecasts. Back returns to the previous context.

Accessible controls
48dp minimum touch targets; visible labels; status text plus color.

Local language and numbers
ETB beside money; explicit units; allow future Amharic text expansion.

Truthful prototype behavior
Label sample records and demo forecasts. Never mix them with real shop data.

Confirm before implementation
Identity/shop assignment; stock threshold; ML history minimum; safety-stock policy.

Proposed enhancement to agree
Add Stock receipt flow and stock correction policy need backend support.

Build handoff
Next.js interaction reference now; Flutter recreation after UI selection.

Scope and evidence
No admin dashboard or full offline sync. Recommended UX; validate with retailers.
